**CS 307: Systems Practicum**
**Activity 7: Syslog**
**To be done in class groups; due: before the end of the class on 29th Feb 2024**

Q1. Please follow the steps defined in the class to explore the logs (for Windows users, you can install Ubuntu app 20.04 from the Windows store):

a. Display syslogs with the ls command                                            [0.25]
b. View system logs in Linux using the tail command                               [0.25]
c. View rsyslog.conf file with a text editor                                      [0.25]
d. View rsyslog.d file with a text editor                                         [0.25]

**Optional bonus for an extra +1 mark:**

Try the use of the logger shell command as given here:

https://www.networkworld.com/article/3274570/using-logger-on-linux.html

Does it update the syslog file with messages?
